BARBECUE LIGHTING GEL

Safer to handle and more economical
to use than conventional fluids

Barrettine
TRUSTED BY THE PROFESSIONALS

BARBECUE LIGHTING GEL

A concentrated formulation which is easily applied to any barbecue fuel, making it more economical than traditional lighting fluids. The gel is quick to light and will not taint cooked food.

Conforms to EN 1860-3: 2003-12

DIRECTIONS OF USE: Shake bottle well before use.

- The cap is applied at a certain torque for safety. If you find the cap difficult to remove run the neck of the bottle under hot water for a minute or so and retry.
- Pile briquettes or lump wood in a pyramid shape and cover generously with lighting gel.
- After approximately 2 minutes light with long matches or taper. After 30 minutes the charcoal will take on a grey ash colour. Carefully spread charcoal out.
- The firelighter must have fully burned away before food is placed on the barbecue.
- NEVER APPLY LIGHTING GEL ON TO HOT OR BURNING COALS.
- Store out of reach of children.
